

MARKSMAN METALS

IS EXCITED TO ANNOUNCE THE RECENT
PURCHASE OF TWO ADDITIONAL CNC
PRESS BRAKES!

ONE 175 TON

&

ONE 90 TON

CINCINNATI®

MAXFORM

Hello Everyone!

Marksman Metals has exciting news! In our continuing efforts to offer the most current technology in Precision Sheet Metal Fabrication, we have recently spent **\$600,000** and purchased/ installed **TWO** new Cincinnati Maxform CNC Press Brakes! Here are the details!

175 TON Cincinnati Maxform Hydraulic Press Brake 12 foot bed with off line programming. This machine has Quick Tool Changing and Auto Crown. This machine has 3D Bend Simulation offered by Cincinnati.

90 TON Cincinnati Maxform Hydraulic Press Brake 10 foot bed with off line programming. This machine also has Quick Tool Changing and Auto Crown. This machine has 3D Bend Simulation offered by Cincinnati.

We have also **upgraded our TWO 135 Ton** Cincinnati Press Brakes to the new Cincinnati Bend Simulation 3D Software.

We currently have **12 CNC Press Brakes** in our Forming department.

We have also done a **\$125,000** upgrade to our Welding Department by adding more weld stations AND upgrading our ventilation system. We now have **16 welding stations** including Robotic Welding. Our new air filtration systems filters the air from each welding bay and recirculates it back into our **AIR CONDITIONED** shop! This reduces our overall Energy costs and improves Air Quality!

If you are interested in more details related to these improvements or any other areas, please contact us at 763-497-4640!
